

Steps To execute BDK in your System ::

:: The steps are almost same for all ( windows , Unix , Linux ) based OS

For Windows ::

:: Keep the Bean Folder at convenient place  
:: Open the Bean->beanbox->run.bat  
:: execute run.bat directly by double clicking on it  
:: and divertido !!  
:: You can now use a deprecated application

For Unix ::

:: Keep the Bean Folder at convenient Place  
:: Open the Bean->beanbox->run.sh  
:: open Terminal ,go to the location using cd command  
:: there are two ways to execute the script  
:: First ::: give the execute permission  
    chmod +x run.sh  
    ./run.sh

:: Second ::: Easy way  
    bash run.sh

:: otra vez Divertido !!

For Linux ::

:: All same as Unix  
:: Linux is Unix based ( talk some sense ).

If Facing Any Error ::

Mail The screenshot with the issue you are facing to

::[helpgithub@gmail.com](mailto:helpgithub@gmail.com)

::[githubhelp@yahoo.com](mailto:githubhelp@yahoo.com)

Adios!
